Tanski SE, McClure AC, Jernigan DH, Sargent JD. Alcohol brand preference and binge drinking among adolescents. *Arch Pediatr Adolesc Med.* 2011;165(7):675-676.

eFigure. Proportion of U.S. underage drinkers reporting binge drinking (5 or more drinks) in the past 30 days by favorite brand of alcohol to drink and gender.

eTable. Percent of U.S. underage drinkers reporting favorite brand of alcohol to drink, by favorite brand of alcohol to drink and gender, and reporting binge drinking (5 or more drinks) in the past 30 days by favorite brand and gender (as in figure but with numbers for prevalence and 95% CI).

This supplementary material has been provided by the authors to give readers additional information about their work.

eFigure. Proportion of U.S. underage drinkers reporting binge drinking (5 or more drinks) in the past 30 days by favorite brand of alcohol to drink and gender.

Footnote: The red line corresponds to the upper limit of the 95% confidence interval for adolescents who did not identify a favorite brand of alcohol to drink ("None" category). If the lower limit of the 95% confidence interval for another category is higher than this, the proportion is significantly higher than the "None" category.
